# TempNFC Lite

Temp NFC Lite is the basic version of the Android App for the TempNFC temperature data logger management, downloadable for free from Google Play. The other versions of the App are: Pro (paid version, complete functions, no Cloud synchronization) and Enterprise (free, activated through Tecnosoft Cloud subscription, complete functions).

Finally, you can manage temperature monitoring using a Smartphone or a Tablet and INSTANTLY share the readings you downloaded.

Main features

- TempNFC programming and downloaded of the recorded data
- Real time checks against alarm thresholds and transport duration
- MKT calculation
- Bar Code and QR Code scan of the items being monitored in the shipment (possibility to input other data manually)
- Geolocalization of the start and stop positions, saved with the mission data
- Automatically send PDF reports to the email address set by the person sending the goods

Applications

Logistic&Transport

Warehouses

Environment

Pharmaceutical

Medical

Healthcare

Food & Beverages

Constructions

Industrial

Laboratories

Technical specifications

Operating systems	Android
Data loggers supported	TempNFC
Data management	Data stored in internal memory, SD Card; share via email
Data display	Mission result, PDF
Customizable parameters	Minimum and maximum limits, absolute minimum and maximum limits, activation energy for MKT calculation, mission maximum duration, notes and info (sender, operator, recipient), recipient email address for automatic delivery, manual start (start button).
Calculated parameters	MKT
It requires	NFC Android device
